

# 7 DAY WIRELESS FORECASTER

# **WEATHERFX**

FOR GOLF

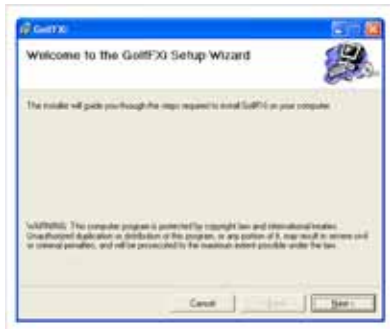

## Quick Start Guide

# Bushnell®

MODEL# 960071C  
Lit #: 98-1429/04-09

## Step 1: Install the Software

Insert the CD, click the “Golf FXi Setup Wizard” button and follow the on-screen directions to install the Golf FXi software on your PC (*Windows 2000 or later, with an “always on” internet connection*).

## Step 2: Connect the Transmitter

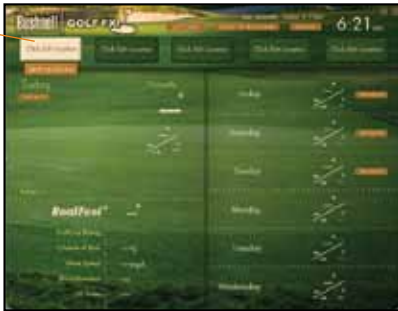

Connect the USB Transmitter to your PC's USB port.

## Step 3: Start the Golf FXi Application, Set Locations and Units

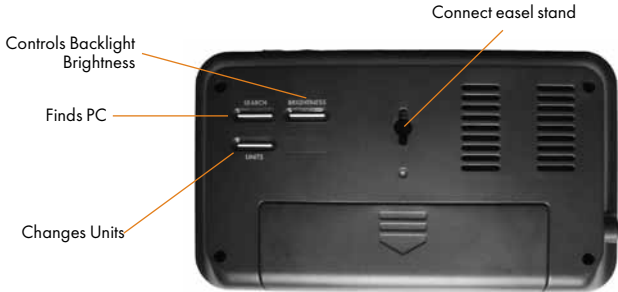

Double click the "Golf FXi" icon  on your desktop. When the application opens, move your cursor to the top (left) box, then click the orange "Edit Location" box when it appears (3a). Set your home course by selecting from the three drop down lists, then click "Save" to store (3b). Follow the same process to set up any or all of the remaining four location boxes for other courses. Next, click the "Settings" button and set your preferences for temperature, wind speed units and time format, then click "Save" (3c). In the main Golf FXi application window, you can click on any of the other "courses" you set up to see the forecasts for that location.

3a

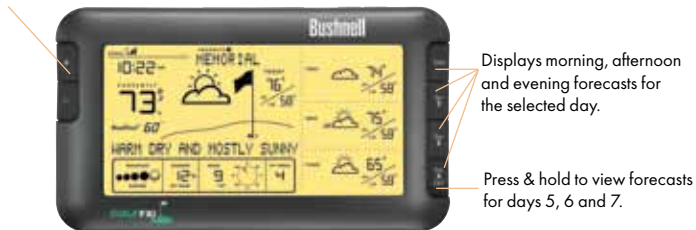

## Step 4: Set-up the Receiver Unit (LCD Display)

Insert 4x AA batteries into the Receiver, or connect its supplied AC adapter. The Receiver's display initializes and reads "Searching for PC" (press the SEARCH button on the back of the unit if this does not appear). Attach the easel stand to the Receiver and place it near your PC so you can see its display while you complete the setup.

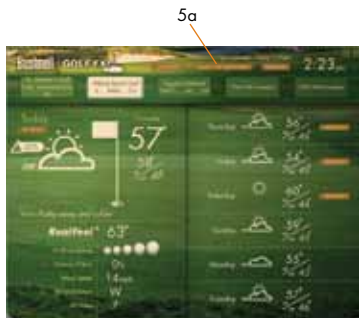

Toggle between your 5 stored golf course locations

## Step 5: Transmit Weather Data from the PC to the Receiver

Click "Send to Receiver" on the Golf FXi program window (5a). The red LED on the USB Transmitter will glow, then blink while data is transferred from the PC software to the Receiver. The Receiver will indicate "PC FOUND-PLS WAIT 5 MINS." When the Transmitter's light stops flashing, the receiver's display should match the weather data shown on the PC. Use the +/- buttons to change locations on the receiver.

Keep the Golf FXi application running in the background and your PC powered on and connected to the Internet so the Receiver can provide you with the latest up-to-date forecast information.

### BACKLIGHT COLOR REFERENCE : Temperature Range

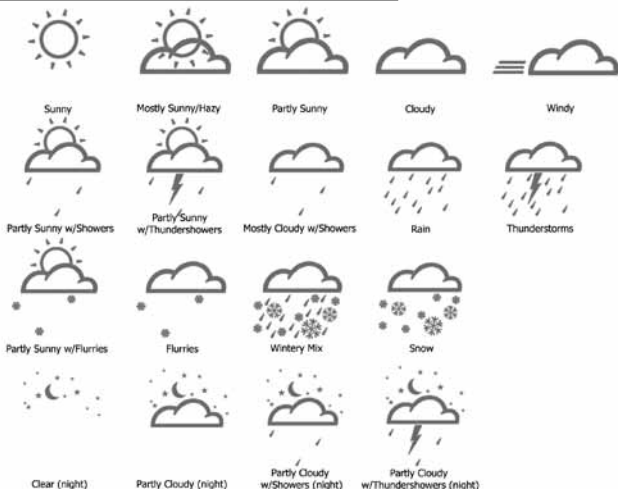

Cold 30s 40s 50s 60s 70s 80s Hot

## FCC COMPLIANCE INFORMATION

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protections against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with these instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

**Note:** If harmful interference to radio or television reception should occur, determined by turning the product off and on, the user is encouraged to correct interference by trying one or more of the following measures:

- Relocate the receiving antenna.
- Increase the separation between equipment and receiver.
- Connect product to an outlet on a circuit different from receiver.
- Consult an experienced radio/TV technician for help.
